## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 15-28 are rejected under 35 U.S.C. 102(b) as being anticipated by Long et al (US 6098000).

Regarding claims 15,21,27-28 Long et al teaches determining a corrected internal value during a filling or emptying process with aid of a pressure value determined by a pressure sensor depending on a switching state of a valve provided for filling or emptying the container (col. 12 line 8-65).

Regarding claim 16,22 Long et al teaches during filling or emptying of the container depending on the corresponding switching state of the valve the pressure value measured by the pressure sensor is actuated with at least

one predetermined characterizing the filling or emptying of the container (col. 12 line 8-65).

Regarding claim 17,23 Long et al teaches at the beginning or at the end of filling or emptying of the container depending on the corresponding switching state of the valve the pressure value measured by the pressure sensor is filtered (col. 12 line 8-65).

Regarding claim 18,24 Long et al teaches the pressure value measured by the pressure sensor is filtered after the beginning or the end of filling or emptying for the period of a predetermined or capable of being predetermined period of time (col. 12 line 8-65).

Regarding claim 19,25 Long et al teaches in a switching state of the valve in which the container is neither filled nor emptied, the pressure value measured by the pressure sensor is processed unchanged (col. 12 line 8-65).

Regarding claims 20,26 Long et al teaches the pressure value is continuously determined by means of the pressure sensor during the filling or emptying process of the container (col. 12 line 8-65).

***Conclusion***

The prior art as cited on the 892 is made of record and not relied upon but is considered pertinent to applicant's disclosure.
